City Bridge Venlo

April 2007 • by Sander Görtjes

On 2 May 2007 the end result of the make over of the Venlo City Bridge was revealed. The bridge is an important logistic cross point for the district of Venlo and needed to receive a facelift. Since December 2006 Lagotronics was working on the new railing which has 450 meter of white LED lighting inside. The LED lighting is used to illuminate 122 railing segments (3.70 meters long) with engraved logo's of the Venlo skyline. These logos are printed into a hardened glass panel by our local partner Scheuten Glasgroup. Lagotronics provided Scheuten Glasgroup with a special license to develop and use the dot system in the glass version of the LagoLED® Deko Panel.

Lagotronics is very proud with the implementation of LagoLED® and DecaLED® products into this large architectural project and feel that it once again shows the endless possibilities that LED lighting solutions offer.

The Venlo City Bridge contains:

- 244 x DecaLED® IP Strips White 1000mm
- 244 x DecaLED® IP Strips White 800mm
- 125 x DecaLED® IP PSU 30W

For more information visit our website or contact us directly.

With kind regards,

Sander Görtjes
